Acknowledgement

We express our sincere gratitude to our project guide, **Dr. J.P. Purwar**, for their invaluable guidance, encouragement, and continuous support throughout the development of the Hive to Harvest project.

We extend our heartfelt gratitude to the **DST–Technology Enabling Centre (DST-TEC), Govind Ballabh Pant University of Agriculture and Technology, Pantnagar,** for providing the opportunity, resources, and support that made this project possible.

We would also like to thank the beekeepers, equipment dealers, consultants, training centres, and Krishi Vigyan Kendras (KVKs) for their cooperation and valuable contributions during the implementation of the project.

We gratefully acknowledge the contribution of everyone who directly or indirectly assisted in making **Hive to Harvest** a successful initiative.

Executive Summary

Hive to Harvest is a hybrid support platform developed to simplify beekeeping by bringing essential apiculture services under one ecosystem. The initiative combines an online website with offline assistance to connect beekeepers with verified equipment dealers, training centres, Krishi Vigyan Kendras (KVKs), honey testing laboratories, and expert consultants.

The project aims to address the lack of a centralized support system by providing beekeepers with easy access to quality equipment, technical guidance, training opportunities, and management support. Farmers are introduced to the platform through a catalogue containing a QR code that directs them to the website, where they can explore resources and contact the Hive to Harvest team. Based on their requirements, they are connected with the appropriate service providers and experts for personalized assistance.

By acting as a bridge between beekeepers and key stakeholders in the apiculture sector, Hive to Harvest reduces the time and effort required to access reliable information and services while promoting scientific and sustainable beekeeping practices. The platform aims to improve productivity, enhance knowledge dissemination, and support the overall growth of the beekeeping community.

Introduction

Beekeeping is an important agricultural enterprise that contributes to income generation, employment, crop pollination, and biodiversity conservation. In India, it has emerged as a promising allied activity for farmers due to its low investment requirements and high income potential. However, despite increasing interest in apiculture, many beekeepers face challenges in accessing reliable technical guidance, quality equipment, training facilities, and trustworthy service providers. Information related to beekeeping is often scattered across different sources, making it difficult for farmers to obtain timely assistance.
To address these challenges, Hive to Harvest was developed as a hybrid support ecosystem that integrates both online and offline services for beekeepers.

Problem Statement

Beekeepers often face difficulties in identifying reliable equipment suppliers, locating nearby training centres, accessing expert consultancy for hive management, and obtaining information about government support and technical services. The absence of a centralized support system results in fragmented information, increased time and effort, and limited access to scientific beekeeping practices. These challenges can reduce productivity and discourage both existing and aspiring beekeepers.

Objectives

- To develop an integrated support platform for beekeepers that combines online and offline services.
- To connect farmers with verified equipment dealers, training centres, KVKs, honey testing laboratories, and expert consultants.
- To provide reliable information and technical guidance for scientific hive management.
- To simplify access to essential beekeeping resources through a single, user-friendly platform.
- To promote sustainable beekeeping practices and improve the productivity and livelihoods of beekeepers.

About Hive to Harvest

Vision

To create a well-connected and accessible beekeeping ecosystem that empowers farmers and aspiring entrepreneurs by providing reliable support, expert guidance, and seamless access to essential apiculture services, thereby promoting sustainable and scientific beekeeping practices.

Overview

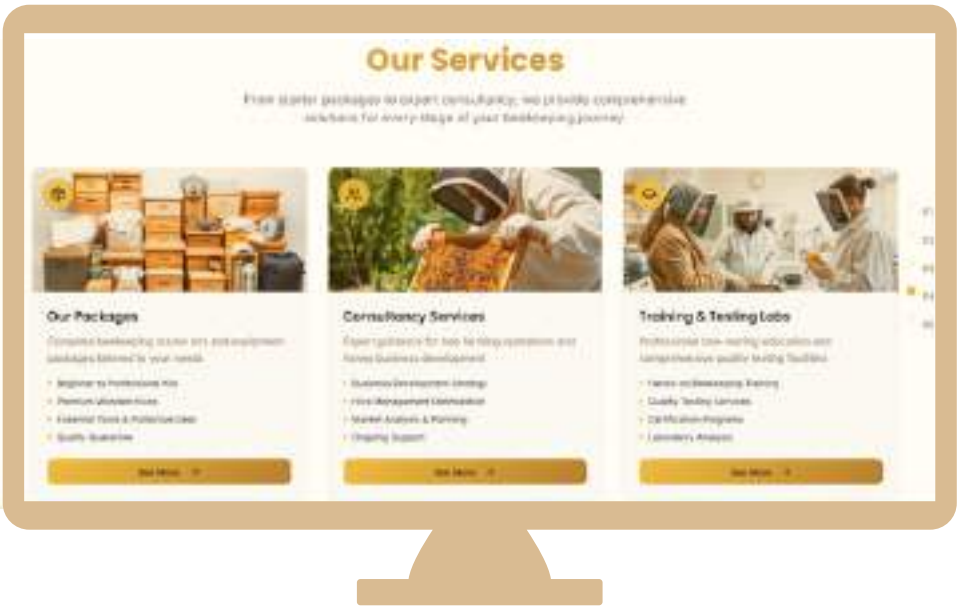

The website is a subscription only website. A person can avail certain services after logging into the website, while certain services are free of cost. The website acts as an online medium to connect the customers to us, rest work is carried out offline. once a costumer contact us through the website about the service they require could be requirement of equipment, training, testing laboratories or apiary management related issues they are connected to the respective dealers, centers and consultants.

The subscription price is Rs 100 only, that is gained through selling the catalogue in hard copy or soft copy which consists a QR code that can be used once and after scanning the QR a person logs into the system and can then further avail services.

Target Users

- Existing beekeepers
- Aspiring beekeeping entrepreneurs
- Farmers interested in adopting apiculture as an additional source of income
- Students and researchers in apiculture and agriculture
- Farmer Producer Organizations (FPOs)
- Self-Help Groups (SHGs)
- NGOs and organizations working in the apiculture sector

Services Offered

Our Packages

In our packages we provide bee keeping equipment to beekeepers. Information about new equipment/technology is also disseminated among farmers.

Consultancy services

Consultancy services is provided for Management, disease, pest related problems or any other issues regarding beekeeping from setup to marketing of produce.

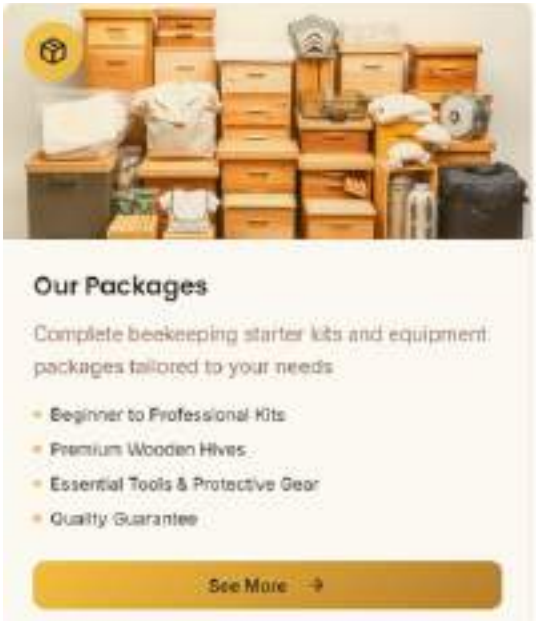

Training and Testing Labs

Interested farmers are connected to their nearby training centres for training and information is dissemenated among them.

Services Offered

Our Packages

- Beekeeping equipment were provided to beekeepers either by directly connecting them to our network of dealers or through us as middleman.
- Prices were compared and best deals were handed to farmers.
- equipment reached directly to farmers doorstep.

How we operate ?

Online

- First, farmer registers in our website by using one time QR available in catalogue.
- After logging back in now the farmer has access to our network of dealers.
- Farmer can find dealer according to their area and order items on their own without any middleman.

Offline

- First, farmer registers in our website by using one time QR available in catalogue.
- Now instead of ordering directly farmer contacts our agent.
- The agent carefully selects items required according to their needs.
- Comparison is made among prices, agent orders on behalf of farmer and the best deal is handed over to him.

Services Offered

Consultancy services

- Consultancy services is provided to farmers.
- Starting from setup, management and marketing of their produce.
- Farmers are connected to their nearby KVK's and SAU's.
- Personal consultants are also provided to attend them anytime to resolve their issues.

How we operate ?

Online

- First, farmer registers in our website by using one time QR available in catalogue.
- After logging back in now the farmer has access to all the information of nearby KVK's and SAU's along with contact information.
- Farmer can contact them directly schedule a visit and solve their problems.

Offline

- First, farmer registers in our website by using one time QR available in catalogue.
- The farmer now contacts our personal consultant about their issues.
- The consultant according to their issues either schedules a visit for them in their nearby KVK's or if resolvable through call gives them advice.
- Farmer can avail the personal consultant service as long as their subscription remains.

Services Offered

Training & Testing Labs

- Farmers who wish to take training for beekeeping are connected to their nearby training centres.
- If a farmer wishes to test their honey they are also provided information and connected to their nearby testing labs.

How we operate ?

Online

- First, farmer registers in our website by using one time QR available in catalogue.
- After logging back in now the farmer has access to all the information of nearby training centres and testing labs.
- If the farmer is already connected to a group of beekeepers and they require training.
- They can avail it from centres on their own by using the information.

Offline

- First, farmer registers in our website by using one time QR available in catalogue.
- The farmer now contacts our agent.
- If the farmer is alone and not yet connected to any beekeeping community, the agent first adds him to our existing network of beekeepers.
- Now the farmer becomes part of the group and training is scheduled for them.

Implementation & Progress

Stakeholder	Description
Farmers	Around **200 beekeepers** and farmers connected through Hive to Harvest as of now.
Equipment Dealers	Network of verified dealers supplying beekeeping equipment.**(8 Suppliers)**
Training	More than 100 farmers connected for training in 2-3 groups and successfully completed training.
Catalogue	In total 50 catalogues sold so far in kissan mela and to farmers in our area.
Personal Consultants	Provided personalized consultancy for hive management, pest and disease management, and other technical issues.
Honey Testing Laboratories	Guided farmers to nearby honey testing laboratories for quality analysis and certification support.

Catalogue

Start Your Beekeeping Journey With Us

In this catalogue, you'll find the basic equipment, starter tools, and essential knowledge needed to begin an apiary. And the best part? You can buy all the listed equipment directly from our website through trusted and verified links — so you don't have to search anywhere else.

Equipments

Queen cage

Queen cell protector

Swarm catching bag

Dummy board

Bottom board

Scan. Join. Grow.

Step 1 - Copy the link to reach the website or type following url on chrome.
https://hive-to-harvest-site.vercel.app/

step 2 - Go to sign up page.

Step 3 - Fill all the necessary details.

Step 4 - Scan the QR.

Step 5 - You are logged in.

! A QR can be used once , single device at a time.

By joining our platform and community, you get exclusive access to:

- Free personal consultancy sessions (Ask anything — setup, equipment, management, problems).
- Step-by-step beekeeping support, from Day 1 to harvesting.
- Help in apiculture training and certification.
- Simplified beekeeping management guides.
- Help in choosing the right equipment and avoiding costly mistakes.
- Updates, tips, and alerts for better colony health.
- A community of learners and beekeepers you can connect with.

Catalogue

Equipments

Hive box

Stand

Smoker

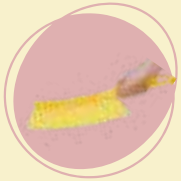

Queen excluder

Hive tool

Decapping knife

Bee veil

Gloves

Bee brush

Pollen trap

Honey extractor

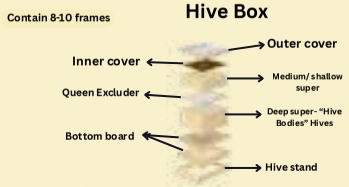

Feeder

INITIAL SETUP

Hive Placement

Hive Box

Hive cover

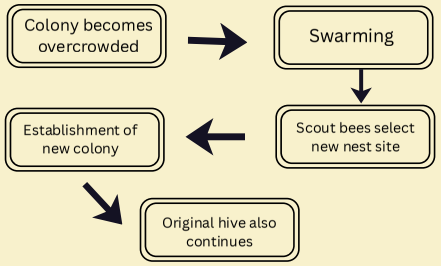

Feeding

In rainy season, when natural food is scarce plastic feeder with sugar solution is kept inside hive, bees also feed on til, mustard crops, etc.

Migration (Swarming) Cycle of *Apis mellifera*

Extraction of honey

1. Inspection of the Hive
2. Smoking the Hive
3. Removing the Frames
4. Uncapping (Removing Wax Layer)
5. Placing Frames in the Extractor
6. Filtering (Straining)
7. Settling
8. Bottling
9. Cleaning the Equipment

Management of Apis mellifera

Space and Population

Provide balanced space for brood, honey, and empty comb.

Feeding

Feed sugar syrup during dearth periods. Always maintain reserves of stored honey.

Colony Health

Maintain colony health by checking on them every week

Environment

Know local nectar plants and blooming seasons. Give shade, protect from rain/cold, and shift colonies if needed.

Knowledge & Record keeping

Keep hive notes on queen, brood, honey, and pests.

Prevent Swarming

Split colonies if many queen cells are seen, to prevent swarming.

Pest Management

i)Wax Moth: Clean hives, expose combs to sun, use Bt spray, sulphur fumigation, or cold storage.

ii).Ants- Keep apiary clean, use water/oil stands, and maintain bowls regularly.

iii)Wasps/Hornets: Trap, reduce hive entrances, destroy nests, and migrate colonies if needed.

iv)Mites
1.Varroa mite: Use formic/oxalic/lactic acid, thymol, and remove drone brood.

2.Tracheal mite: Control with formic acid and. thymol.

3.Reptiles: Keep hives 40–60 cm above ground, apply grease/oil to stands, and clear grass/bushes nearby.

4.Mammals: Bears, raccoons, martens, skunks, rodents damage hives for honey/brood. Protect with fencing, hive stands, reduced entrances, traps, or scare methods.

उपकरण

मधुमक्खी-पेटिका

स्टैंड

स्मोकर

रानी बहिष्कृत

छत्ता उपकरण

डिकैपिंग चाकू

मधुमक्खी का पर्दा

दस्ताने

मधुमक्खी ब्रश

पराग जाल

शहद निकालने वाला यंत्र

फीडर

प्रारंभिक सेटअप

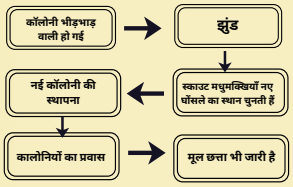

फीडिंग

बरसात के मौसम में जब प्राकृतिक भोजन दुर्लभ होता है चीनी के घोल के साथ पारंपरिक फीडर छत्ते के अंदर रखा जाता है, मधुमक्खी लिंग सरसों की फसलों आदि पर फ्रीड कर सकती है।

प्रवास (झुंड) साइकिल ऑफ एपिस मेलिफेरा

शहद निकालने की प्रक्रिया

1. छत्ते का निरीक्षण
2. धुआँ देना
3. फ्रेम निकालना
4. कैपिंग (मोम की परत) हटाना
5. एक्सट्रैक्टर में रखना
6. छानना
7. बैठने देना
8. बोतल में भरना
9. उपकरण साफ करना

एपिस मेलिफेरा का प्रबंधन

स्थान और जनसंख्या

बच्चे, शहद और खाली छत्ते के लिए संतुलित स्थान प्रदान करें

फीडिंग

अकाल (दुकाल) की अवधि के दौरान चीनी की पानी खिलाएँ। हमेशा संग्रहीत शहद का भंडार बनाए रखें।

सामुदायिक स्वास्थ्य

बीमारियों और कीटों के लिए नियमित रूप से निरीक्षण करें। कमज़ोर/आक्रामक रानियों को बदलें और उपकरणों का अच्छी तरह से रखरखाव करें।

पर्यावरण

स्थानीय अमृत पौधों और खिलने वाले मौसमों को जानते हैं छाया देना बारिश ठंड से बचाओ और यदि आवश्यक हो तो हिंदी में लिखित कॉलोनियों को शिफ्ट करें

ज्ञान और अभिलेखन

छत्ते का निरीक्षण रानी मधुमक्खी , ब्रूड , शहद , और कीटों की स्थिति पर

झुंड को रोकें

यदि छत्ते में कई रानी कोशिकाएं दिखाई दें, तो झुंड को रोकने के लिए कॉलोनी को विभाजित कर देना चाहिए।

कीट प्रबंधन

1. मोम पतंगा (Wax Moth) नियंत्रण के उपाय: छत्ते साफ रखें ,कंघियों को धूप दिखाएं,बीटी स्प्रे का उपयोग करें,सल्फर धूमन,कोल्ड स्टोरेज।

2. चींटियों से बचाव: ,मधुमक्खी पालन गृह को साफ रखें ,पानी/तेल के स्टैंड का उपयोग करें,कटोरियों का नियमित रखरखाव करें।

3. माइट
- वरोआ माइट नियंत्रण : फार्मिक एसिड,ऑक्सालिक एसिड,लैक्टिक एसिड ,थाइमोल,ड्रोन ब्रूड निकालना।
- श्वासनली के घुन (Tracheal Mite): का फॉर्मिक एसिड (Formic Acid) और थाइमोल (Thymol) से नियंत्रण करे।

4. सरीसृपों से बचाव के उपाय :छत्तों को ज़मीन से ऊपर रखें,स्टैंड पर ग्रीस/तेल लगाएँ ,आस-पास की घास/झाड़ियाँ साफ़ करें।

5. भालू, रकून, और कुछ कृंतक (चूहे जैसे जानवर) - इन शिकारियों से बचाव के कुछ तरीके: बाड़ लगाना,छत्ता स्टैंड,प्रवेश द्वार छोटा करना,जाल,डराने के तरीके।

Future Scope

- Develop a dedicated mobile application to enable easier access to consultancy services, equipment procurement, training registrations, and service requests.
- Introduce an integrated equipment ordering and delivery system, allowing farmers to place orders directly through the platform and connecting it to an e-store.
- Build a comprehensive digital knowledge repository containing best management practices, seasonal advisory, training materials, and educational resources for beekeepers.
- Establish collaborations with universities, research institutions, government agencies, and beekeeping organizations to strengthen knowledge exchange and improve service delivery.
- Create a community forum where beekeepers can share experiences, discuss challenges, and learn from experts and fellow practitioners.
- Expand personalized consultancy services by onboarding additional subject experts to provide timely technical guidance for colony management and other beekeeping operations.
- Incorporate multilingual support to improve accessibility for beekeepers from different linguistic regions of the country.
- Strengthen the offline service network to ensure faster coordination between farmers and nearby equipment dealers, training centres, consultants, and other stakeholders.
- Scale Hive to Harvest into a nationwide integrated apiculture support ecosystem that serves as a single point of contact for information, technical assistance, resource procurement, and capacity building.

Conclusion

Hive to Harvest was developed to address the fragmented nature of support services available to the beekeeping community by creating a hybrid online–offline ecosystem that connects beekeepers with the resources they need. Rather than functioning solely as a website, the initiative served as a service platform that facilitated access to equipment dealers, training centres, Krishi Vigyan Kendras (KVKs), honey testing laboratories, and expert consultants through a combination of digital accessibility and personalized offline support.

The pilot implementation demonstrated the practicality of this approach by establishing a network of stakeholders and connecting approximately 200 farmers with essential apiculture services. Through direct coordination, technical guidance, equipment procurement support, and knowledge dissemination, Hive to Harvest simplified access to reliable information and services, reducing the time and effort required by beekeepers to seek assistance.
With further expansion of its stakeholder network and digital capabilities, Hive to Harvest has the potential to become a comprehensive support ecosystem for the apiculture sector.

By strengthening collaboration between beekeepers, service providers, and extension institutions, the platform can contribute to improved productivity, wider adoption of scientific beekeeping practices, and the sustainable growth of the beekeeping industry.
